## BASES

## BULB INFORMATION

A bulb is described by:

- 1) A letter indicating the shape of the bulb - (shown above) - and
- 2) A number indicating the greatest diameter of the bulb.

Most American bulbs (SAE or ANSI) measurements are given in "eighths of an inch"  
 For Example: T-4 equals four "eighths" of an inch or one half inch in diameter  
 S-8 equals eight "eighths" of an inch or one inch in diameter

Most European bulbs (DIN or ECE) measurements are given in millimeters  
 For Example: T19mm equals a tube diameter of 19 millimeters  
 RP30mm is a Rounded Parabolic bulb measuring 30 millimeters in diameter
